Part 2b. Description of Role with Payment Cards  
(ROC Sections 2.1 and 3.1)

Describe how the business stores, processes, and/or transmits account data.

*Little Pond Ltd., hereafter referred to as Prommt, is an e-commerce integration service provider.*

*Prommt has developed a payment integration solution that sits between merchants and acquires providing prompts via SMS or email to customers to make payments via the acquirer(s) that the merchant has a relationship with.*

*Processing:*

	<p><i>Prommt connects to each PCI compliant Payment Service Provider directly via their specific API or iFrame solution. No processing of cardholder data occurs on the Prommt system.</i></p> <p><i>Transmitting:</i></p> <p><i>Cardholder data is transmitted to each PCI compliant Payment Service Provider via TLS 1.2 session utilizing their native API to undertake the processing of cardholder data.</i></p> <p><i>Storing:</i></p> <p><i>Prommt stores tokenised customer details in a MySQL database and stores it in encrypted and hash format. Hashes generated are used to search the database to verify if the card data is already in the database transaction.</i></p>
Describe how the business is otherwise involved in or has the ability to impact the security of its customers' account data.	<p><i>Prommt brokers encrypted payment requests between cardholders and PCI-compliant gateways, making its control of TLS certificates, cipher suites, and API endpoints critical for transit security. While storing only tokenized card references, the strength of Prommt's key management and database access controls determines token security.</i></p> <p><i>Prommt's infrastructure components—including Cloudflare edge protection, AWS VPC with load balancers, security groups, and GuardDuty monitoring—enforce network segmentation and threat detection. Any misconfiguration could compromise the entire cardholder data environment.</i></p> <p><i>Additionally, Prommt's merchant portal and SDKs control API key management and role-based access permissions. Poor configuration could enable attackers to redirect payment flows or access stored tokens.</i></p> <p><i>Prommt's cryptographic controls, infrastructure security, and operational safeguards are therefore essential to protecting customer account data throughout the payment process.</i></p>
Describe system components that could impact the security of account data.	<p><i>Prommt uses the following components in its CDE which are included in this assessment:</i></p> <p><i>For e-commerce payments:</i></p> <ul style="list-style-type: none"> <li><i>Cloudflare</i></li> <li><i>AWS Fleet Manager</i></li> <li><i>AWS Load Balancer</i></li> <li><i>AWS Virtual Private Cloud</i></li> <li><i>AWS EC2 Security Groups</i></li> </ul>

	<ul style="list-style-type: none"><li>• <i>AWS GuardDuty</i></li><li>• <i>Internet gateways</i></li><li>• <i>NAT gateways</i></li></ul>
--	---

Part 2. Executive Summary (continued)

Part 2c. Description of Payment Card Environment

Provide a high-level description of the environment covered by this Assessment.

For example:

- Connections into and out of the cardholder data environment (CDE).
- Critical system components within the CDE, such as POI devices, databases, web servers, etc., and any other necessary payment components, as applicable.
- System components that could impact the security of account data.

Prommt, as a service provider, hosts its CDE on a PCI DSS compliant cloud-based Amazon Web Services (AWS) infrastructure.

The following processes and procedures performed by Prommt can impact the security of cardholder data:

- Protecting the AWS-based CDE from unauthorized access and operations.
- Ensuring secure cardholder data transmission from the cardholder to the merchants' choice of PCI compliant payment service provider.

Prommt services only card-not-present payment transactions.

Indicate whether the environment includes segmentation to reduce the scope of the Assessment.
